Know The Plant World Closely

Watch the Online class before attending the worksheet....

The online link is given here....

Click here: https://youtu.be/y2uiPtY5_Ao

Plants that absorb water and minerals from the host plant and prepare their own food with the help of their leaves are known as **semi parasites**. Eg. Loranthus.

Plants that absorb food directly from the host plants are **total parasites**. Eg. Cuscuta.

Both semi parasites and total parasites **harm the host plants**.

Activity 1

Cuscuta and vanda are harmful to host plants.

Do you agree with this? Write the reason.

.....

.....

.....

Activity 2

Children, there are loranthus and vanda on a mango tree and a tulsi plant near by. They are introducing themselves. What might be told by these plants while introducing? Try to write down.

Tulsi

Vanda

Loranthus

Watch the Online class regularly and note down the points discussed there....

Do all the activities given in the worksheet and send to the teacher....

All The Best
